

These are the requirements for Homework 11:

1. **Create a board manually.**
2. **Send a request to retrieve the list of boards associated with the user.**
Make sure to **save the ID** of the created board to use in later requests.
3. **Send a request to create a list on the created board:**
 - Create a test to **verify that the response status is 200.**
4. **3.1.** Send a request to retrieve the information of the created list:
 - Create a test to **verify that the list name matches** the one used in the "create list" request.
5. **Send a request to create a card on the previously created list:**
 - Create a test to **verify that the response status is 200.**
6. **4.1.** Send a request to retrieve the information of the created card:
 - Create a test to **verify that the card name matches** the one used in the "create card" request.
7. **Send a request to update the name of the created card:**
 - Create a test to **verify that the response status is 200.**
8. **5.1.** Send a request to retrieve the updated card information:
 - Create a test to **verify that the card name was updated correctly.**
9. **Send a request to delete the previously created card:**
 - Create a test to **verify that the response status is 200.**

Note: Depending on the type of action, use the following HTTP methods:

- **GET** – to retrieve data
- **POST** – to create data
- **PUT** – to update data
- **DELETE** – to delete data

All tests must be written in the **“Tests” tab** in **Postman**.
