

These are the requirements for Exercise9:

1. Open the browser and devtools.
2. Access the [website](#).
3. Analyze the request to <https://www.makeup.ro/>, including the method and status.
4. Add any product to the cart and analyze the cart request: check the method and status.
5. In the search bar, type something on <https://www.makeup.ro/> and analyze the request and its status. Include screenshots of the requests and statuses in the homework. Describe the result of each request, the HTTP method used, and what that method means.
