Screenshot Explanation 5

cart – various products:

I added multiple products to the cart, and you can observe how the values in the "cart" have changed:
 quantity, total number of products, and price.

checkout – header:

- **Request URL:** https://makeup.ro/checkout/

- **Request Method:** GET
 → Returns the requested resource.

- **Status Code:** 200 OK (from service worker)
 → Indicates that the GET request worked correctly and the requested data was successfully returned.

checkout – preview:

Displays a preview of the checkout page – "place order".

checkout – response:

The **response** represents the HTML document/code for the "checkout" page.

Data after attempting to place an order and filling in the required fields + modifying or deleting products from the shopping cart:

place order + fill in information:

- **Request URL:** https://makeup.ro/ajax/city/

- **Request Method:** POST
 → Sends data to the server.

- **Status Code:** 200 OK
  → Indicates that the request was successfully processed;
  The server returns a response with the requested data.

modify product quantity in the shopping cart:

- **Request URL:** https://makeup.ro/ajax/cart/

- **Request Method:** PATCH
  → Used to make changes/updates to an existing resource.

- **Status Code:** 200 OK
  → The modification/update of the resource was successful.

remove products from the shopping cart:

- **Request URL:** https://makeup.ro/ajax/cart/

- **Request Method:** DELETE
  → Used to delete resources from the server.

- **Status Code:** 200 OK
  → The request was successfully completed and the resource was deleted.
