Explanations for Screenshot – 2

The website https://makeup.ro/ was accessed directly via the link from item no. 2 in assignment no. 9.

I observed different methods and statuses when clicking on various "requests / objects / files".

header-evt1-preflight:

preflight – a verification request sent by the browser to the server.

- **Request URL:** https://analytics.makeup.global/evt

- **Request Method:** OPTIONS

- **OPTIONS** – describes the communication options for the resource. It is used to determine which methods are supported by the server.

- **Status Code:** 200 OK
  → The request was successfully completed.

header-evt2-XHR:

XHR – *XMLHttpRequest* – a JavaScript object used in programming to interact with servers.

- **Request URL:** https://analytics.makeup.global/evt

- **Request Method:** POST

- **POST** – sends data to the server to create a new resource

- **Status Code:** 200 OK
  → The request was successfully completed.

video:

Media – video file.

- **Request URL:** https://i.makeup.ro/video/h/hu/hu4bewpusfiw.mp4

- **Request Method:** GET

- **GET** – request to retrieve data from the server

- **Status Code:** 206 Partial Content
  → Server response used to handle partial data transfers;
  It is used when only part of the requested resource is sent to the client.

header-collect-ping:

ping – a term used in networking to check the accessibility of a computer on a network.

- **Request URL:** https://region1.analytics.google.com/g/...

- **Request Method:** POST

- **POST** – sends data to the server to create a new resource

- **Status Code:** 204 No Content
  → The server successfully processed the request but did not return any content.
