Video Analysis

The video shows how the main requirements of the assignment were completed on the website https://makeup.ro. Below is a summary of what is presented in the recording:

1. **Website Access**
   The user opens the site directly from the link provided in the assignment.

2. **Product Interaction**
   A product (with ID 553218) is accessed by clicking on it. The header, preview, and response sections are shown using browser developer tools.

3. **Inspect Tool Usage**
   The video demonstrates how the "Inspect" tool is used to analyze different types of requests such as:

   - OPTIONS (preflight check),

   - POST (sending data to the server),

   - GET (retrieving data like video or HTML),

   - PATCH (updating product quantities in the cart),

   - DELETE (removing items from the cart).

4. **Cart Activity**
   Multiple products are added to the cart. The user shows how the cart updates its values (quantity, total, and price).

5. **Checkout Process**
   The checkout page is accessed. The video shows that placing an order requires completing mandatory fields. Also, the user simulates modifying quantities and deleting products.

6. **Network Panel Observations**
   For each user action, the video captures how network requests are triggered and explains the status codes (200 OK, 204 No Content, 206 Partial Content).
